

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings which are used on lift masts so as to help them work within tough environmental conditions. Lift masts are normally subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is often exposed to environmental influences like dust, cold, heat, contamination, aggressive ambient air and moisture. Thus, the guidance arrangements of lift masts should be specifically strong and have a specific high load carrying capacity.

Carriage rollers have been developed as the solution for functioning in various environmental conditions. These bearings are the solution where the guidance arrangements of the lift masts must be cost-effective and maintain operational security while having the capability to handle a specifically high load carrying capacity.
