

Used Parts for Forklifts

Used Forklift Parts - Without doubt, forklift components will eventually wear out and need replacing. The choice of purchasing new parts can become pricey so another idea is to purchase used parts. This can save much money eventually. It is a great idea to acquire used forklift parts that have been remanufactured. These components will guarantee that you are getting components which will work for a long time and be productive.

Remanufacturing broken and worn out components is a less expensive method in general than rebuilding. With rebuilding components, only the parts that are worn out or broken get replaced, which means that other wearable parts may break down soon after purchase.

Remanufacturing however provides the best guarantee for second-hand components. Reproduced components are taken apart and cleaned and then all wearable pieces are changed. All wearable components are replaced regardless of age or wear which is another reason why remanufactured components overall work so much better. Any component within the part is new and this offers far longer life to the used part. Based on the lift truck parts that are being redone, the cleaning process and the whole remanufacturing process will vary.

The engines are cleaned after a complete disassembly. Various engine parts like for instance pistons, spark plugs, rings, filters, valves, and valve springs can be replaced during the process of remanufacturing. The engines are hot tested after reassembly to ensure that there are no noise, no oil pressure problems, no leaks or any vacuum.

Transmissions are oven cleaned, pressure washed, and disassembled. A complete inspection is performed so as to check for any cracks. Bushings, seals and bearings are all replaced. Typically, the replacement parts used on transmission components meet OEM specifications.

Some parts like for instance the alternator, the water pump, torque converters, steer axles and the starter can obtain longer serviceability after being remanufactured and having all wearable parts replaced. The electronic control in the electric lift truck is maintained by the control card. This card can likewise be remanufactured with replacing all aged and worn out parts. Unlike various lift truck parts the control card can only have the worn and aged parts replaced.

Components which are remanufactured have to be comprehensively inspected upon reassembly to ensure they are in good condition previous to being sold. When obtaining these parts, it is a good idea to be sure that they have undergone all of the proper testing and inspections. On certain bigger components like for instance steer axles, engines and transmissions, OEM specification replacement components should be used.

The forklift dealer could guarantee that the parts they have reproduced meet the OEM specifications. This would also ensure the components meet industry standards. A lot of details go into remanufacturing second-hand components. This attention to detail provides more serviceability out of reproduced parts than the parts that were only rebuilt.
