

Forklift Fork Positioners

Forklift Fork Positioner - The fork positioner is a hydraulic apparatus which can allow the driver to be able to work the lift truck without leaving the seat. They are made out of high quality materials and are intended to be able to withstand the most demanding procedures and work environments. Side shifting models have the extra ability to laterally position the entire load or the arms so as to facilitate much more exact lifting and placement in a faster and more efficient manner.

The unique fork pocket design can enable the one operating it to securely sway the unit's forks without any worry of destroying the positioning cylinders. This could allow the worker the option to either perform independent or simultaneous blade movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be converted into fork positioners on available units.
